

Results for the 8'x140' circular tank with ramp:

Circular tank:

Tank Diameter = 140 ft

Tank Wall thickness = 10 in (actual)

Tank Height = 8 ft

$f_y = 60,000$ psi

$f'_c = 4,000$ psi

Horizontal Steel = #4 rebar		
Bar #	Spacing (in)	Distance from finished floor (ft - in)
1	3	0' 3"
2	12	1' 3"
3	12	2' 3"
4	10	3' 1"
5	10	3' 11"
6	8	4' 7"
7	8	5' 3"
8	6	5' 9"
9	6	6' 3"
10	6	6' 9"
11	6	7' 3"
12	6	7' 9"

Vertical Steel = #4 @ 12" O.C.

Dowels "L" bars from tank to footing shall be #4 @ 12" O.C. 26" vertical leg, 8" horizontal leg

In the tank wall, at the corner of the notch for the ramp add:

3-#6 bars x 7'-10" long @ 4" O.C. vertically.

3-#6 bars x 20' long @ 4" O.C. horizontally.

4-#6 bars x 6' long @ 4" O.C. at a 45 degree angle.
